

Summary of Modifications to SMART in August 2013 Revision 1 (14.11.1) Release Release Date September 13, 2013

This table summarizes the major changes for users in the August 2013 SMART Release.

Several modules change in the new version to provide greater functionality to the user or to correct previous issues, as summarized below.

SMART Module	Description
Code Table Editor	Only available to WITS systems administrators. Make several tables (ECourt and DrugTest) editable through code table editor and Updates to Type of Contact table. In order to manage a separate list of Type of Contacts and Outcomes between the ECourt Case Management and the Court and Other Criminal Justice screens, separate code tables have been added and are editable through the code table editor. The code tables that were added are: E Court Case Management Outcome, E Court Case Management Contact Type, E Court Criminal Justice Outcome and E Court Criminal Justice Contact Type. The code table for Drug Type is now an editable code table and is accessible through the code table editor.
PSCourt	Add a new menu item "Current Situation" to the PS Court menu located between the Court & Other Justice and Discharge menu items. The Current Situation screen has Current Situation History and Current Situation Details section. The Status drop down on the Current Situation Details is a required field and the values for this field are accessible through the E Court Current Situation Status code table editor.
Client Outcome Measure	A yellow screen no longer occurs when clicking the Generate Report link.
Continuing Care	When selecting Add A New Check-Up prior to entering any information you will now see the following error message: "Continuing care checkup cannot be created before creating continuing care overview" rather than a yellow screen.
Authorization Period	Removed the Overlapping Period Rule. User can now save an Authorization period that overlaps with another Authorization period.
Security	Only applies to WITS systems administrators. Agency Oversight Assignment screen is back to being accessible by staff having the WITS Administrator role as opposed to the "Oversight (Read-Only)" role. The role restriction issue for this screen was introduced as part of the fix to enable Agency Oversight roles and functionality for all instances in work item #15515 in the June 2013 release.

Some Changes Only Apply to Department of Juvenile Services and are listed below

DJS - Code table changes causing errors in MD ASSIST system (MD-DJS)	To prevent processor errors from occurring, the following changes were made to correspond with database code value changes implemented for an Iowa repository enhancement in the July 2013 release: <ol style="list-style-type: none">1. Changed the constant for the client unknown address type code from "CU" to "-103".2. Changed the constant for the "None" special initiative code from "2" to "-103".
DJS Contact: Screen does not clear or auto filter when viewing next client record	Previously, if you had visited another client in the same browsing session, that client's DJS Contact search results initially displayed when loading the DJS Contact screen for another client. This problem has been resolved.
